EDUCATION

MKSSS's Cummins College of Engineering for Women, Pune

Bachelor of Engineering in Computer Science (8.9)

Maharashtra

2024-2027

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, SQL
- **Technologies/Frameworks:** Pytest, LLM, RAG Pipelines, Vector Database, MongoDB
- **Developer Tools:** Git, Android Studio, VSCode, Eclipse, n8n, Eleven labs
- **Relevant Coursework:** DSA, DBMS, OOP, Networking, Operating System

EXPERIENCE

Cisco

June 2026 - Sep 2026

Internship (SWE Intern I)

Bengaluru, Karnataka

- Developed an AI-powered PoC that generates context-aware comments and docstrings for Python AP test scripts using hierarchical intent analysis, adhering to the required AP-specific documentation format.
- Automated 100% of eligible comment and docstring blocks, passing Git checks and reducing manual documentation effort by approximately 70%.
- Enriched AP inputs for MendMax and SMX RAG, enabling more contextual blueprint generation, stronger root-cause analysis, and more accurate bug-fix recommendations.

Cisco

June 2025 - Aug 2025

Internship (Technical Intern I)

Bengaluru, Karnataka

- Worked on Load Balancing, improving performance in high-throughput environments.
- Resolved flaky test cases in Load Balancing General and Hashing Characterization modules by analyzing logs and identifying root causes, improving overall test stability.
- Implemented reliable fixes, raised detailed PRs with 100% merge rate, and ensured smooth integration through thorough testing.

PROJECTS

RAG-Based Document Intelligence System | *n8n, RAG, LLM, Embedding, Vector Database* | [Git](#)

- Developed a Retrieval-Augmented Generation (RAG) AI agent that automatically ingests PDFs from Google Drive, generates vector embeddings, and stores them in Pinecone for semantic retrieval.
- Built an intelligent document Q&A system using n8n, enabling users to query uploaded documents through Telegram and receive context-aware, document-grounded responses.

AI-Powered Production Failure Analyser | *Python, FastAPI, Groq API, Javascript, PyPDF2* | [Git](#)

- Developed an intelligent production failure analysis system that simulates live system metrics and logs, with injectable failure scenarios such as memory leaks, database timeouts and disk exhaustion.
- Implemented automated AI-driven analysis using the Groq API to examine metrics, logs and uploaded PDF files, generating severity ratings, root causes and actionable fix recommendations.

Training and Placement Application | *Java, XML, Firebase, Android* | [Git](#)

- Developed an Android application for managing college placement activities and performing analysis.
- Features include tracking company recruitment processes, maintaining students' interview experiences, and monitoring placement progress through a placement tracker.

ACHIEVEMENTS

- Selected for **Cisco CWIP (Cisco Women Internship Program)**.
- Achieved **1st position** in the Avishkar Coding Competition organized by College of Engineering, Karad
- Secured **2nd rank** in IEEE MMCOE Ideathon.
- Achieved **2nd rank** in TechTangle Project Competition.
- Secured **3rd rank** at the **Atlas Copco** Case Study Competition
- Solved **500+** problems across platforms including **LeetCode**, **GeeksforGeeks**, and other platforms.
- Selected among the **top 100** students nationwide for the **IIT Bombay** Bootcamp.
